MICHELL'S *Reliable Grass Mixture*

Michell's Lawn Seed has been a leader in high quality for over sixty years. Many of the better lawns in this country are the result of Michell's seed, plus proper care. The answer lies in our insistence on furnishing only that seed which meets our rigid specifications of highest purity and germination and maximum freedom from weeds.

Quantity to sow for Lawns. We recommend sowing: 5 pounds per 1000 square feet; 150 pounds per acre on new ground without grass. In renovating established lawns, use half the above quantities.

We are sure that lawns produced by using it will be a delight to the most exacting observer. We would suggest that you give it a trial if you desire the finest lawn in your community. Michell's "Distinctive" Flower Seeds

FOR NOVELTIES AND SPECIALTIES, See Pages 6 and 7

During our fifty-nine years of service to American garden lovers, we have always maintained a reputation for seed of superior quality. The success of our many customers in growing superior plants has strengthened our conviction that we shall supply only those varieties and strains of finest quality.

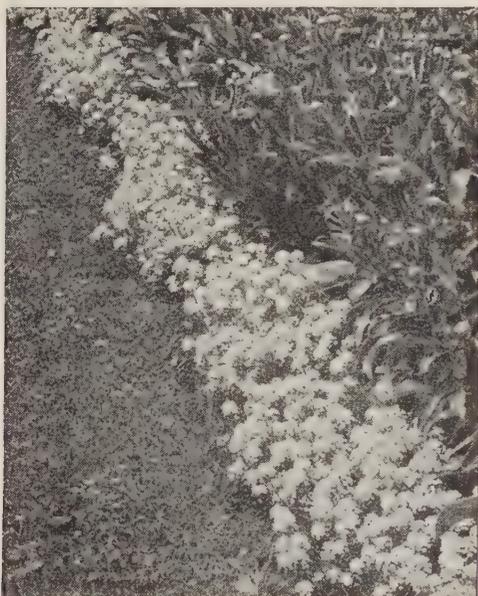

In the pages that follow, all of our Flower Seeds are arranged alphabetically. The annuals, biennials, and perennials are carefully marked so that those who are not familiar with the different kinds of plants will not be confused.

Annuals. These grow to maturity, bloom, ripen their seed, and die the same year. Asters, Poppies, Sweet Peas, Morning-Glories, and Zinnias are typical examples. Some of these Annuals are sown in a sunny window indoors, or in a hotbed or coldframe from March to May in order to get an early start. Seed of practically all Annuals can be sown in the open ground after danger of frost has passed.

Biennials. These are raised from seed started in early summer, flowering the second year, after which they die. Typical examples are Pansies, English Daisies, and Canterbury Bells.

Perennials. These plants live on from year to year, increasing in size and in beauty with age. Typical examples are Aquilegia, Delphinium, and Hardy Phlox. Many Perennials may be grown from seed, which is usually planted outdoors from June to September. The young plants may be carried over the first winter in a coldframe or they may be set in their permanent places in early autumn and given a light protective mulch the first season. Some Perennials are known as half-hardy and require winter protection each season, and those known as Tender Perennials require greenhouse protection over winter.

A complete index of Flower Seeds will be found on page 95. Varieties marked ★ are especially suitable for rock-gardens.

No other flower has achieved more popularity. The Petunia is a plant that can be attractively used in an endless number of ways. New and charming colors and forms add to the interest of these indispensable garden flowers. They thrive in various climatic conditions and can be used in a perennial border, or in a rock-garden; they also effectively combine with other garden flowers, and a garden entirely of Petunias is a delightful picture.

For freedom of bloom, variety of color, and effectiveness, the Petunia has few equals for the flower garden, porch or window-box. They commence blooming early and continue until killed by frost. Thoroughly water the soil and then lightly scatter the seed on the surface. Do not cover the seed with soil. The receptacle should be covered with a sheet of newspaper and a pane of glass, and kept in a warm location until the seedlings start to grow. It is important not to discard the small seedlings, as these usually produce the best double flowers.

Michell's Summer-Flowering Bulbs

Amaryllis

Amaryllis

CULTURAL DIRECTIONS: There are few bulbs which will give the amateur gardener (or even the professional) more for his money or time than the Amaryllis.

Place the bulbs, when they are procurable (usually from fall until spring), in pots 4 to 6 inches or more in diameter, and cover only to the shoulder of the bulb, leaving the neck protruding. Use a rich sandy loam, mixed with some bonemeal or sheep-manure. Water sparingly at first but increase as the growth increases. A temperature of from 50 to 60 degrees is the most suitable. The flower-spikes, often 3 to a bulb, will develop quickly, and each bears several of the immense, beautifully colored, lily-like flowers.

After blooming, it takes the foliage a considerable time to complete its growth, and the plants should be well cared for during that period, to insure next year's blooming. Dry off gradually and after the leaves turn yellow, keep the pots in a cool and dark place for about 4 to 5 months, when they can be started again as described above.

Giant American Hybrids

The finest race of Amaryllis in cultivation, exceeding in size and fine form of their flowers as well as in the diversity of colors and markings, all former hybrids. Flowers striped and flaked. We offer mixed colors only.

Michell's Hardy Garden Lilies

A garden is not complete without a planting of Hardy Lilies. They do exceedingly well in the herbaceous border. The varieties listed can be planted in the early spring months, and it is recommended that they be planted among hardy perennials, as the shade from the surrounding plants is necessary for their welfare.

CULTURAL DIRECTIONS. All Hardy Lilies should be planted from 6 to 10 inches deep. The bulbs should be completely enveloped in sand and no manure should come in contact with them, but may be placed 4 to 6 inches underneath. All loose-petaled bulbs should be planted on their sides instead of upright. Cover with leaves or litter during winter.

Michell's Gorgeous Gladiolus

There is no other summer-flowering bulb that is enjoying so great popularity as the Gladiolus. Their adaptability to garden decoration or to use as cut-flowers during the summer and early autumn is surpassed by no other flower. They are not only showy in the garden, but when cut with the first flower open will last for ten days in the house. While they thrive in almost any good garden soil, better results may be had if soil is well prepared and enriched with some of our pulverized manures. TIME OF SHIPMENT. Unless specially requested, tubers will be shipped March 15 to June 1; plants, May 15 to June 15.

CULTURE. Dahlias are at their best during the latter part of September or early in October. To get exhibition blooms, disbud plants up to August 1. Spade or plow the soil 1 to 1½ feet deep; fertilize with manure or Hyper-Humus; scatter about ¼ pound of bonemeal around each hill when planting. If soil is very heavy, incorporate a liberal quantity of granulated peat moss. About August 1, apply about ½ pound bonemeal to each plant and work in thoroughly; sheep manure or potato fertilizer can be substituted for bonemeal at this time to good advantage.

How to Keep Dahlia Tubers After They Are Shipped to You If Too Early to Plant

Open package and allow tubers to remain in packing material. Do not expose to air or moisture too much; keep in a cool place, but not where they will freeze.

LETTUCE

LAITUE (Fr.) LATTICH SALAT (Ger.)
LATTUGA (Ital.)

One ounce will produce about 2500 plants

Heading Varieties

For the first outdoor crop, seed is usually sown in hotbeds in February or March and transplanted to the garden in April in rows 1½ feet apart, 8 to 12 inches apart in the row. For a succession, sow in drills in the open ground at intervals of two to three weeks and thin out to 8 inches apart. Where it is difficult to have the heading varieties develop properly on account of soil condition, we recommend using loose-leaf varieties.

Bibb. 60 days. A distinct variety with a crispness and flavor of its own. The heads are medium sized, the outer leaves deep glossy green, and the interior bleaches to a rich yellowish waxy green. Pkt. 15c.; ½oz. 25c.; oz. 45c.; ¼lb. \$1.25.

Excellent for spring and early summer culture. Pkt. 25c.; ½oz. 75c.; oz. \$1.25; ¼lb. \$3.75.

Pennlake. 82 days. Bronze Medal, 1948 All-America Selections. As the name indicates, this is another new variety bred by Pennsylvania State College for smoothness, uniformity, and lack of ribbiness. It is the result of a cross between Great Lakes and Imperial No. 44, combining the solidity and summer heading ability of the former with the larger head size of the latter. Pkt. 25c.; ½oz. 75c.; oz. \$1.25; ¼lb. \$3.75.

VEGETABLE PLANTS AND ROOTS

Owing to existing conditions and traffic difficulties, we are unable to deliver free, orders for vegetable plants and roots under the minimum price of \$3.00 on each consignment.

We regret that it is not practicable to ship pot-grown plants of PEPPER, PARSLEY, EGG-PLANTS, and TOMATOES by Parcel Post.

The foliage of these plants is very soft and tender and we have found from experience (largely because of delays in the mail service), that they reach their destination in a worthless condition.

Nor can we ship any of the above-mentioned plants outside the Japanese beetle zone.

A fresh supply of these plants will be available during the planting season at our store, 516-18 Market St., Philadelphia 5, on a cash-and-carry basis.

MICHELL'S SELECTED HAND-PICKED FIELD CORN

Plant 8 to 10 quarts per acre in hills for shelled Corn or for silo, or sow 1½ to 2 bushels broadcast for fodder

Our strains of Corn are not the common kinds usually found in abundance on the market. We give very careful attention to selected stock in all lines of farm seeds. This is particularly true of Field Corn where re-selection means the limit of crop with little or no increase in

cost. Our stock is selected for size of ear and fodder, uniformity of kernel, and the careful finish of the tip and butt, all of which means a considerable increase in production. Field Corn weighs 56 pounds per bushel.

Iowa 939 Hybrid

Maturity 100-105 days

Adapted to a wide range of conditions. Ears are cylindrical shaped; kernels somewhat rough and soft. Popular with cattle feeders because of non-flinty kernel. Qt. 65c.; pk. \$2.95; bus. \$9.25.

Ohio C 12 Hybrid

Maturity 110-115 days

One of the newer varieties which has been giving remarkable performance records. It matures a trifle earlier than U. S. 13, produces a good-sized ear, deep grain and stiff stalk. Can be recommended as a late variety for the south central and southwestern counties as well as the lower eastern counties of Pennsylvania. For an exceptionally heavy yield, plant Ohio C 12 this year. Qt. 65c.; pk. \$2.95; bus. \$9.25.

Ohio K 24 Hybrid

Maturity 95-100 days

The best medium early hybrid variety. Adapted to southwestern and central counties of Pennsylvania, northern New Jersey and certain sections of New York State. Produces leafy, dark green plants of medium height. Ears are medium low on stalk; 14 to 16 rows of large, fairly deep, richly colored kernels. Corn-borer resistant. Qt. 65c.; pk. \$2.95; bus. \$9.25.

Pa. 612 Hybrid

Maturity 110-115 days

A new hybrid developed by Pennsylvania State College. In about the same maturity class as Iowa 939 and Improved Leaming. Very strong stalk; rates high in resistance to aphids and borers. Qt. 70c.; pk. \$3.10; bus. \$9.95.

U. S. 13 Hybrid

Maturity 110-115 days

Matures about nine days later than Lancaster County Sure crop. Medium rough, deep grains; medium tall stalk. Good silage producer throughout the eastern states. One of the highest yielding of all hybrid varieties for both grain and silage. Qt. 65c.; pk. \$2.95; bus. \$9.25.

Lancaster County Sure Crop

Silage 90 days—Grain 100 days

The most popular variety for silage in Pennsylvania, New York and the New England states. It is adaptable to practically all climatic and soil conditions and will withstand drought. A favorite because it provides plenty of silage with rich feed value. Grows tall, leafy stalks; long ear with thin cob—high in protein, husks easily, shells well, rich yellow. Qt. 50c.; pk. \$2.10; bus. \$6.80.

Field Corn, U. S. 13 Hybrid

Eight-rowed Yellow Flint

Grain 90 days

Grows a long ear with exactly eight rows of grain. Thin cob, grain very hard and of a deep golden color. Qt. 50c.; pk. \$2.20; bus. \$6.95.

MICHELL'S HIGH-GRADE FARM SEED, continued

LADINO WHITE CLOVER

Sow it for a year-round pasture. U. S. Department of Agriculture says: "Ladino is the largest growing form of White Clover. It is similar to White Dutch but grows about twice as large. Introduced from South Europe. Many farmers cut it for hay in the summer and graze it the rest of the year."

It is a long-lived perennial. Its taproot goes down 1 to 3 feet. The stems run on the ground, taking root. One plant covers 2 feet. A sparse stand soon thickens into a dense, even growth. The only parts available to grazing are the highly nutritious leaves and flowers which rise 12 to 20 inches in great profusion from the numerous joints.

It grows on any soil, even shallow hardpan, but does best on loam or clay where moisture is plentiful. The seed is so small it requires a firm hard seedbed, planted shallow and covered very lightly. Our seed is scarified, germinates over 90 per cent, requiring one-half as much per acre. Inoculate and sow in spring or fall, 5 pounds per acre alone, or 3 pounds in mixtures. Don't pasture until plants spread and start sending up shoots from the joints. Lb. \$3.50; 10 lbs. \$30.00.

Wild White Clover. This Clover is suited for soils below the fertility standard and provides a most effective and economical source of nitrogen. It is perfectly hardy. Sow from 1 to 3 pounds per acre in mixture, preferably in the early spring. ¼ lb. 75c.; lb. \$2.75; 5 lbs. \$12.50; 10 lbs. \$23.50.

Yellow Trefoil (*Medicago lupulina*). Also known as Yellow Clover. Recommended for use in permanent pastures because of its ability to furnish pasture during the spring months. Lb. 60c.; 10 lbs. \$5.00; bus. \$30.00.

RECLEANED CLOVERS

Clovers weigh 60 pounds per bushel

Alfalfa, Common (*Medicago sativa*). Non-irrigated. Sow during April and May, August and September, 25 pounds per acre, preferably alone. 60 pounds per bushel. 10 lbs. \$7.50; pk. \$11.00; bus. \$40.00.

Alfalfa, Grimm. An extremely hardy variety, less apt to winter-kill than older sorts. Heavy yielder and of deep-rooting habit. Sow 15 to 20 pounds per acre. 10 lbs. \$11.00; pk. \$15.00; bus. \$52.00.

Alsike or Swedish Clover (*Trifolium hybridum*). One of the hardiest and most tolerant of adverse soil conditions. Grows from 1 to 2 feet high. Sow early in the spring or early autumn, mixed with timothy, or 10 pounds per acre if alone. Lb. 60c.; 10 lbs. \$5.00; pk. \$7.50; bus. \$26.00.

Crimson Clover (*Trifolium incarnatum*). Used principally for soiling or green manuring. Not hardy more than one season. Height 1 to 2 feet. Sow any time from June to October, 20 pounds per acre. Lb. 50c.; 10 lbs. \$3.50; pk. \$4.50.

Mammoth Red Clover (*Trifolium pratense perenne*). Domestic origin. This differs from the Medium, being of a ranker growth and yielding more fodder per acre. Sow early in spring or in July and August, using 15 pounds per acre alone, or with other crops, 10 pounds per acre. 10 lbs. \$6.50; pk. \$8.00; bus. \$30.00.

Medium Red Clover (*Trifolium pratense*). We offer adapted seed of domestic origin only. Excellent for hay purposes, usually yielding two crops each year. Sow early in the spring or in late summer—July and August; if alone, 20 pounds per acre; if with other crops, 10 pounds per acre. 10 lbs. \$6.50; pk. \$8.00; bus. \$30.00.

Lespedeza. A substitute for alfalfa on poor land in the South, but has been grown successfully in the latitude of Philadelphia. Sow in spring after frost, 25 to 35 pounds per acre. Weighs 25 pounds per bushel. Lb. 35c.; 10 lbs. \$2.00; bus. \$4.00.

ALL PRICES SUBJECT TO MARKET CHANGES

Sweet or Bokhara Clover (*Melilotus alba*).

Used either as a feed-crop or as green manure, to plow under. Grows 3 to 5 feet high, thrives on almost any soil. Sow 15 pounds per acre during spring and fall. 10 lbs. \$3.50; pk. \$5.00; bus. \$18.00.

White Dutch Clover (*Trifolium repens*).

Choice recleaned seed. Sow 10 to 12 pounds per acre if alone, or 5 pounds if sown on old turf or with other crops. Oz. 15c.; ¼ lb. 50c.; ½ lb. 90c.; lb. \$1.75; 5 lbs. \$8.50; 10 lbs. \$16.75; 25 lbs. \$32.00.

To produce best results all Clover Seeds, Field Peas, and Cowpeas should be inoculated with LEGUME-AID. See page 93.

FLAX

This is grown for the fibre from which linen thread is made and also for the seed used in the manufacture of linseed oil. If grown for seed, sow 1 bushel to the acre from May 15 to June 15; for fibre sow 1½ to 2 bushels per acre. 56 pounds per bushel. Lb. 40c.

MILLET

Can be sown as late as July 15. Desirable for green manuring or green food for stock. If used for hay, cut just as it matures.

Barnyard. Frequently as high as 12 tons of green feed have been obtained from an acre. If sown early in May, it may be cut twice in one season. Sow 12 pounds per acre broadcast, any time from May 1 to June 15. 35 pounds per bushel. Lb. 35c.

Tennessee Golden. Requires a longer season to mature. Produces very fine hay and makes a larger seed-head. Sow 1 bushel broadcast to the acre from April 10 to July 10. 50 pounds per bushel. Lb. 40c.

SEED OATS

They are large, plump, free from weed seeds or other foreign substance, and of high vitality. Sow at the rate of 2½ to 3 bushels per acre alone or 1½ bushels with peas during April for best results. 32 pounds per bushel.

Swedish or Washington. The long, erect straw is noted for its ability to stand up in rough weather. Grains are very plump and nearly pure white. Qt. 40c.

Clinton. One of the most promising of the newer varieties. Highly resistant to rust and smut. Heavy yield per acre. Extra strong straw, early maturing, not apt to sprout in shock; superb yields. For best results do not sow more than two bushels per acre. Qt. 45c.; bus. \$4.00.

Treat your Seed Oats with Ceresan to control Oat smut and increase yield. See page 90.

RAPE

Dwarf Essex. This can be pastured 8 weeks after sowing. Sow 6 pounds per acre broadcast, from April 1 to October 1. It produces enormous crops and is an ideal green manure. 50 pounds per bushel. Lb. 35c.; 10 lbs. \$3.00.

Stanley's Crow Repellent

Protects your crop against crows, pheasants, blackbirds, etc. Also protects seed from rotting in the ground. Non-poisonous. ½ pt. 60c.; pt. \$1.00; qt. \$1.75. One pint is sufficient for two bushels of Seed Corn.

Rosen Winter. Winter Rye will not mature if sown in spring. Qt. 50c.
